CA LCC Science!

The CA LCC's vision is to support diverse and thriving ecosystems through lasting cooperative partnerships.

In this new report researchers from USGS and UCLA present research on the effects of sea-level rise on tidal marshes along the Pacific Coast. This research was funded by the Southwest Climate Science Center and presented at series CA LCC funded workshops.

Rethinking Adaptation: Zebra finch calls effect chick morphology!

Science hot off the press!

Title: *Warm vegetarians? Heat waves and diet shifts in tadpoles*

Journal: Ecology

Climate change will have many direct and indirect effects on animal behavior. Warmer air temperatures may cause diet shifts in tadpoles. Researchers have documented this phenomena in a laboratory setting with three species of tadpole.

Webinar: A Framework for Evaluating the Vulnerability of Multiple Wildlife Species to Climate Change at Regional Scales

September 22, 2016, 12:00PM PST

Frameworks for evaluating the vulnerability of multiple species to decline or extinction are increasingly needed by agencies that are tasked with managing multiple species. This webinar will present a framework that can help identify focal species for monitoring and highlight priority species for which exposure to climate change and other threats should be assessed.
